

**How can organizations do
agreements, payments, remit
deliverables safely with
others?**

CrossCheck

paradigma

Stacks

Worldwide work challenges we face now

Accelerated change, fair wages, and fulfilling work.

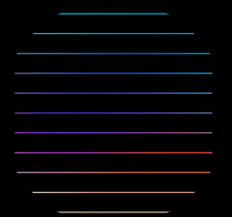

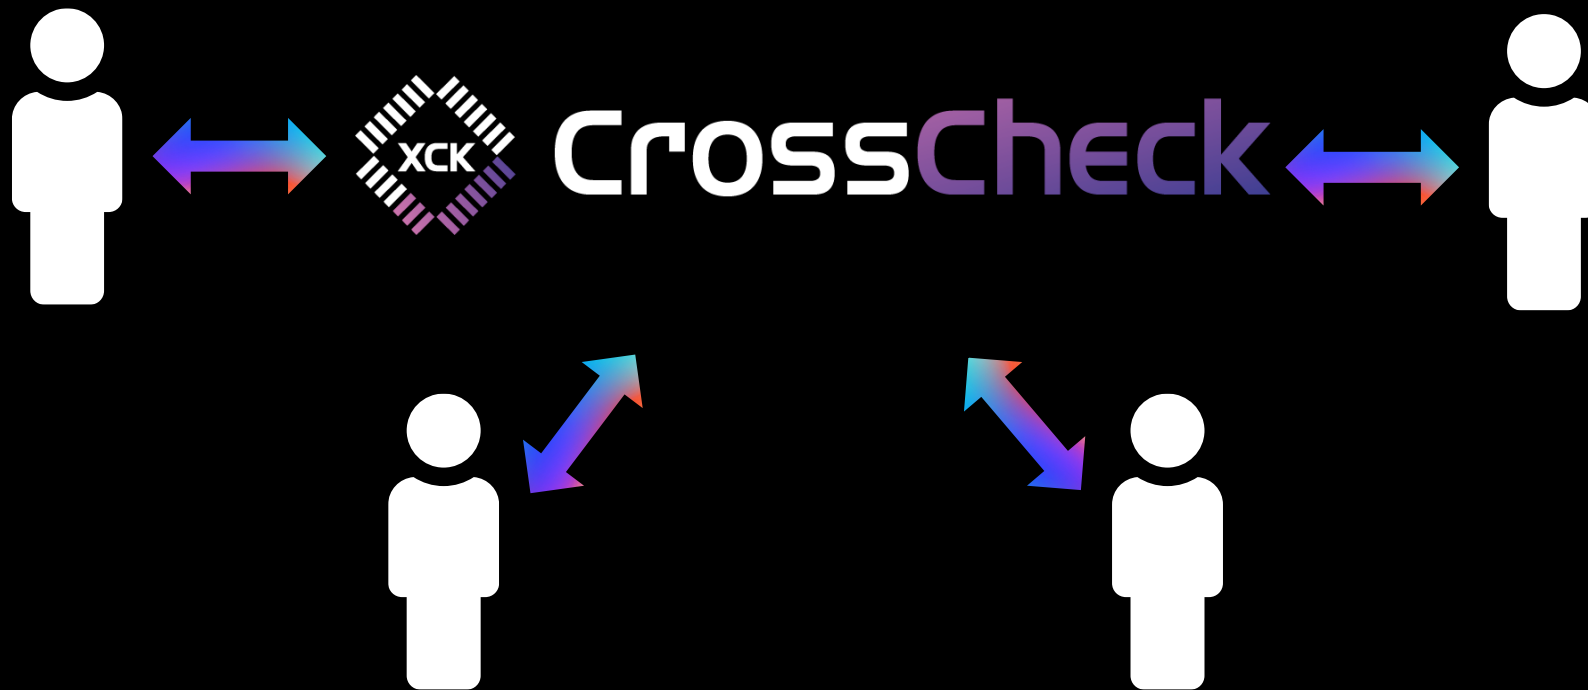

Obstacles holding back for better, more equitable business systems are:

- » Cross-border value transfer
- » Transaction costs
- » Lack of adequate privacy and security.
- » Low traceability

CrossCheck was developed

CrossCheck

Agreements

In a secure way

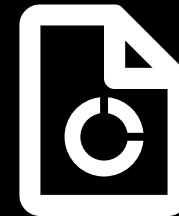

Other entities
or customers

Payments

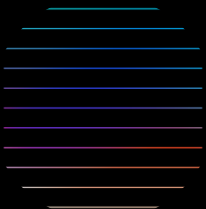

Deliverables

The Agreement and attached files

- » Flexible and modular
- » With customizable business agreements
- » To buy, sell, execute, or just create contracts.
- » Actionable agreements based on smartcontracts

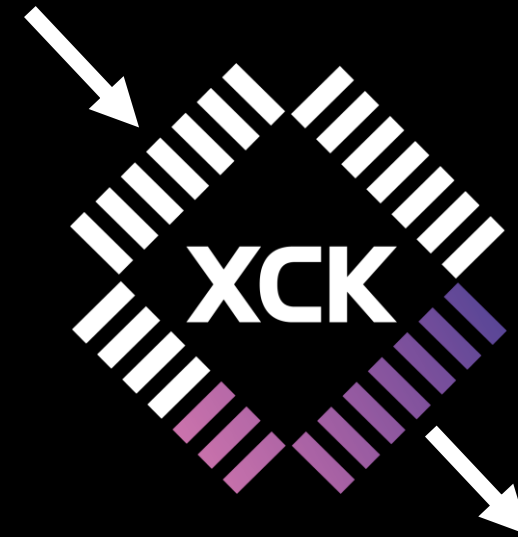

CrossCheck

Payments

- Included if required
- Transfer in cryptocurrencies equivalent to FIAT/Crypto.
- Fast transactions, in minutes
- To/from Any place in the world

CrossCheck

Remit of deliverables

Records different data intelligent forms, and file types.

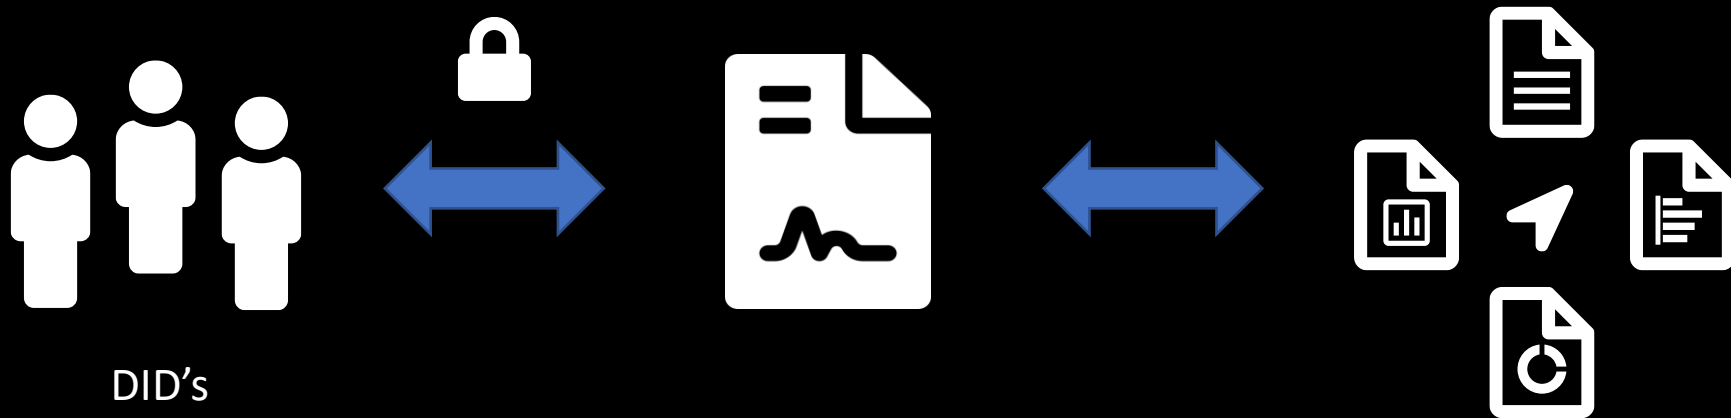

Full business process is timestamped, visible and trackable.

Delivery can be conditioned if a specific payment has been made.

The remit of deliverables can be used to distribute incentives.

Provides a layer of trust

Enables digitally signed blockchain agreements that cannot be denied.

Secure and private data

- Encrypted and non encrypted
- User owned.
- Parties are identified by decentralized identifiers (DID)
- Possibility to attribute them to a National ID.
- Integrity secured on the Stacks and Bitcoin blockchains.

Use Cases

- » When an organization needs to agree on the terms to work together with other entities or customers.
- » When an organization needs to ensure payment for work carried out with others.
- » When an organization needs to deliver results – outputs, such as reports and meeting benchmarks, in a project with their customers.
- » When an organization uses expensive equipment and many subcontractors, much can be saved by having the correct procedures.
